

## Duraflex Introduces New eZee Fit Bead

Following a comprehensive testing programme, Duraflex are delighted to announce the introduction of our new high security 'eZee Fit Bead'. This new featured bead will be launched on 1st August, 2020 and available in all colour finishes.

Both aesthetics and performance have been meticulously designed to ensure the featured detail replicates your current bead (5850) and suites seamlessly with existing installations.

Furthermore, the new eZee Bead **passes and exceeds the enhanced security accreditation (PAS24) and Secured by Design without the use of security clips**, reducing both fabrication and installation time, as well as additional costs. These enhanced security credentials makes the eZee Bead one of the most secure beads on the market today, improving the security and peace of mind for your customers.

Initial trials have been overwhelmingly positive, with this exciting new product proving to be **significantly easier to fit, reducing time on site and improving productivity**.
